M (Typ 240) Firmware Version 2.0.0.12

Improvements in firmware version 2.0.0.12 versus previous version 2.0.0.11

All new cameras being produced now have a new firmware version 2.0.0.12 installed on.
An update for already delivered cameras with version 2.0.0.11 is not necessary, as the changes implemented only apply to the internal production processes.

On the application level, no difference between 2.0.0.11 and 2.0.0.12 can be recognized.
Nevertheless, we provide version 2.0.0.12 through our website, because every camera is compatible with Version 2.0.0.12

We do not recommend to “downdate” from 2.0.0.12 to 2.0.0.11, because unexpected behaviour could occur.

Improvements in firmware version 2.0.0.12 versus previous version 1.1.0.2

Improved performance of the Whitebalance

The accuracy of the Whitebalance presets and the Autowhitebalance function is higher with Vs. 2.0.0.11.
This results in better skin tones and better general color rendering.

Improved Video quality

The visibility of compression artifacts is reduced due to lower video compression.

Lens calibration

For coded Leica lenses the image homogeneity (color shift) has been improved.

General Bugfixes

_Improved stability using Live View with and without EVF-2
_Problem with Display settings in combination with “Sharpness high” fixed
_Problem with bad exposures after switching the camera on fixed.
_The “Auto Power Off” function showed unexpected behavior, this is fixed.
_The recording dates for video files have been wrong sometimes, this is fixed.
_Problem with Copyright- and Artist-Information in EXIF-Data fixed
_Improvement of general system stability
_Several minor bugfixes
